

Test Application

Let's try Description here

Features

Tunisia Chart of Accounts (COA) Configuration

This app includes a comprehensive configuration tool for setting up Tunisian companies with the proper Chart of Accounts. The Tunisia COA configuration tool provides:

- Complete setup of all required Tunisia-specific accounts
- Configuration of Tax Templates for all Tunisia VAT rates (19%, 13%, 7%, 0%)
- Setup of payment methods with proper account linkages
- Warehouse account connections for proper inventory accounting
- Validation tools to ensure your setup is correct

To access the Tunisia COA tools:

1. Install the app
2. Go to "Tunisia COA Setup" from the desktop
3. Select your company and run the configuration

Installation

You can install this app using the [bench](#) CLI:

```
cd $PATH_TO_YOUR_BENCH
bench get-app $URL_OF_THIS_REPO --branch develop
bench install-app my_custom_app
```

Contributing

This app uses [pre-commit](#) for code formatting and linting. Please [install pre-commit](#) and enable it for this repository:

```
cd apps/my_custom_app
pre-commit install
```

Pre-commit is configured to use the following tools for checking and formatting your code:

- ruff
- eslint
- prettier
- pyupgrade

CI

This app can use GitHub Actions for CI. The following workflows are configured:

- CI: Installs this app and runs unit tests on every push to `develop` branch.
- Linters: Runs [Frappe Semgrep Rules](#) and [pip-audit](#) on every pull request.
